1.

in 1949 the course work was probably essentially the same as it had been before World War II. The main difference seemed to be that politics played an important part in one's medical training under the Communists, and this had not been the case before. Emphasis now seems to be more on politics than on medicine. Most of the boys who have gone into medical schools since World War II have been members of the Communist Party. 90 per cent of the students are now given financial assistance by the government. Most boys who are not Party members and who cannot depend on financial assistance from the government cannot afford to go to medical school. The schools do not offer actual classes in Communism where examinations are given at the end of the semester, but there are frequent Communist meetings at the schools during which the boys are criticized, asked to be more active for the party, etc. The Communists seem to believe that in order to be a good doctor one must first be a good Party member.

2. In 1949 there were still some non-Communists on the staff of the medical school at the University of Zagreb. The professors who were not Communists were not forced to join the party because the government realized the need for their services at the school and in order to avoid intimidating them or antagonizing them they did not press the matter. The non-Communist professors were not required to attend the Communist meetings at the schools. The Communists have put a number of their own people on the staff of the medical school, however -- MD's and PhD's who are Party members -- and as scientists they are not as well qualified as some of the older non-Communist professors.

3. Because of the emphasis on Communism [redacted] the students who have 50X1-HUM attended medical schools in Yugoslavia since World War II have not been as well trained as those who received their degrees before the Communists came to power. In 1949 the course in the medical schools was still five years, [redacted] 50X1-HUM
